

GENE profile for Cbx7_mESC (5000 bp, 22689043 reads)

Figure legend. Average distribution of ChIPseq reads along a uniform gene model.

This plot is generated by counting the number of reads along this region for each gene and averaging this value for the number of genes and the number of mapped reads (in millions). The X-axis represents the metagene and the flanking region in which the counts were calculated for each gene. The Y-axis represents the intensity of the average ChIP signal normalized by the number of reads of the sample. TSS is the Transcription Start Site and TES is the Transcription End Site.

ChIPseq experiment:

Cbx7_mESC

Number of reads:

22689043

Number of genes:

18446

Flanking sequence:

5000

RefSeq transcripts:

46881

Window factor:

10
